#### **First Question**

1. What is meant by the "ASCII" code?, Make a complete ASCII code table enough that the standard ASCII code does not need to be extended, write the ASCII code in decimal, binary, and hexadecimal number formats and encoded characters and symbol!

#### Answer:

The American Standard Code for Information Interchange is an international standard in letter codes and symbols such as Hex and Unicode but ASCII is more universal.

# **Second Question**

2. Look for a complete list of assembly language commands for the x86 family intel machine! (from reference books or the internet). This list of commands can be used as a guide to understanding the "boot.asm" and "kernel.asm" programs.

#### Answer:

List of Assembly Directives:

Assembly Directive	Information						
EQU	Defining constants						
DB	Defining data with 1 byte unit size						
DW	Defining data with 1 word unit size						
DBIT	Defining data with 1 bit unit size						
DS	Reserving data storage in RAM						
ORG	Initialize the program's start address						
END	End of program marker						
CSEG	Placement marker in the code segment						
XSEG	Placement markers in the external data segment						
DSEG	Placement markers in the internal direct data segment						
ISEG	Placement markers in the internal indirect data segment						
BSEG	Placement marker in the segment data bit						
CODE	The marker starts defining the program						
XDATA	Defining external data						

DATA	Defining internal direct data
IDATA	Defining internal indirect data
BIT	Defining data bits
#INCLUDE	Include other program files

# List of Instructions

Abbreviation Description
Absolute Call
Add
Add with Carry
Absolute Jump
AND Logic
Compare and Jump if Not Equal
Clear
Complement
Decimal Adjust
Decrement
Divide
Decrement and Jump if Not Zero
Increment
Jump if Bit Set

JBC	Jump if Bit Set and Clear Bit
JC	Jump if Carry Set
JMP	Jump to Address
JNB	Jump if Not Bit Set
JNC	Jump if Carry Not Set
JNZ	Jump if Accumulator Not Zero
JZ	Jump if Accumulator Zero
LCALL	Long Call
LJMP	Long Jump
MOV	Move from Memory
MOVC	Move from Code Memory
MOVX	Move from Extended Memory
MUL	Multiply
NOP	No Operation
ORL	OR Logic
POP	Pop Value From Stack
PUSH	Push Value Onto Stack
RET	Return From Subroutine
RETI	Return From Interrupt
RL	Rotate Left
RLC	Rotate Left through Carry
RR	Rotate Right
RRC	Rotate Right through Carry

SETB	Set Bit
SJMP	Short Jump
SUBB	Subtract With Borrow
SWAP	Swap Nibbles
XCH	Exchange Bytes
XCHD	Exchange Digits
XRL	Exclusive OR Logic
